Amber ID

Amber ID is a security feature located in a transparent window which demonstrates a shifting OVI effect from gold to green when viewed from different angles.

The Amber ID pigment is integrated into the card body so that it is not possible to replace or manipulate the window.

Amber ID allows the sharp, high quality personalization of a ghost image. When viewed against a light source, the window becomes virtually transparent.

The high strength and durability of the materials used, provides excellent flexibility to combine Amber ID with other features e.g. embossed structures, lenses etc.
